

A CRM that runs on process, not on the Founder

Solution report for the SPACEAIR CRM: business analysis, what was built, how the automations reduce owner dependency, the technology used, and screenshots of the working application.

PREPARED FOR
SPACEAIR – MEP Contracting

AI & Automation

DATE · STATUS
26 September 2026
Working build, running locally, with
sample data

What we built

SPACEAIR has grown from 10 people in 2007 to roughly 200 across five locations and four MEP disciplines. Today, enquiries, quotations, AMC renewals and service complaints depend heavily on individuals, and many decisions and follow-ups still route through the Founder. This CRM replaces that with one shared system, a **delegation-of-authority matrix**, and an **automation engine** that does the chasing.

16

modules, from enquiry and BOQ to AMC renewal

20

automation rules, each can be paused or tuned

9

roles with branch-scoped access

40/40

end-to-end workflow checks passing

How it reduces owner dependency

- **Decisions are delegated by rule.** Sales engineers self-approve discounts up to 3%, branch heads up to 8%, and only larger discounts or deals of ₹5 Cr and above reach the Founder. On the sample data, **over 90% of approvals never touch the Founder.**
- **Work is assigned automatically.** New enquiries go to the right engineer, service calls go to the least-loaded technician, a won PO goes to the Projects handover, and renewals go to the account owner.
- **Follow-ups are chased by the system, not by phone.** Response deadlines, overdue follow-ups, stale deals, pending approvals and SLA breaches escalate one level at a time: the person, then the branch head, and the Founder only as a last resort.
- **Recurring revenue is protected.** AMC renewal quotations go out automatically 60 days before expiry, and PPM visits are planned and tracked.
- **Estimation stops depending on one person.** Consultant BOQs are imported straight from Excel and priced from a rate library that learns from every quotation sent. The priced BOQ goes back in the client's own format, formulas intact.
- **Projects run on a defined workflow.** Award → engineering approvals → procurement → execution → QA/QC & commissioning → handover, with each team alerted when it's their turn and an AMC proposed at handover.
- **Visibility comes from exceptions.** The Founder gets one daily digest listing only what needs them, plus live dashboards and reports with no Excel MIS.

What was delivered

- A complete, working web application (Next.js 16 + TypeScript + SQLite) that runs locally with one command, with realistic sample data.
- An automation engine with 20 rules, a 15-minute scheduler and a full audit log of every automated action and client message.
- A public website enquiry form and a REST API for integrations (website, WhatsApp relay, IndiaMART, tender alerts).
- Automated end-to-end tests, and this report generated from the running application.

Context, problems and users

SPACEAIR at a glance

- MEP contractor: HVAC & life safety, electrical (Class I), plumbing / PHE, retrofit, AMC and operations.
- HQ Chennai; branches in Bangalore, Hyderabad, Renigunta and Colombo (Sri Lanka).
- B2B clients: IT parks, data centres, automotive plants, pharma, retail chains, co-working spaces.
- LG System Air-Conditioning authorised dealer; about 200 people.

Problems the CRM addresses

- Enquiries scattered across calls, WhatsApp, email, website, tenders and dealer leads, with no response tracking.
- No single branch-wise view of pipeline, win rate or order book.
- BOQ quotations and revisions kept in Excel and email.
- AMC renewals missed, so recurring revenue leaks.
- Service complaints on WhatsApp with no SLA measurement.
- Approvals and follow-ups bottlenecked on the Founder.

Lead-to-renewal flow covered

Users and what each gets

ROLE	SEES	MAIN BENEFIT
Founder / MD	All branches, exceptions only	Dashboard, owner-only approvals, daily exception digest, reports
Branch head	Own branch	Pipeline, mid-level approvals, escalations, branch digest
Sales engineer	Own enquiries & deals	Auto-assigned enquiries, reminders, BOQ quotes, self-approval up to limit
Estimation engineer	Pipeline, quotations, rate library	BOQ Excel import, auto-pricing, review task per tender, export in client format
Projects / planning	Projects	Six-phase delivery checklist, approval-stall reminders, handover
Procurement	Projects in procurement	Alerted automatically when engineering approvals are complete
Service manager	Tickets, AMC, visits	Auto-dispatch, SLA ladder, PPM planner, chargeable-call alerts
Technician	Own jobs (mobile)	Job list ordered by SLA, PPM visits, one-tap resolve
Accounts	All branches	Advance-invoice tasks on every PO, AMC values

Modules

MODULE	WHAT IT DOES
Dashboard	Role-aware. KPIs for pipeline, orders, enquiries, AMC renewals and SLA; approvals waiting; alerts; tasks; live automation feed. Technicians get a mobile job list.
Enquiries	One queue for every source; auto-assignment and acknowledgement; response-time tracking; log response, re-assign, disqualify, or convert to an opportunity in one click.
Pipeline	Drag-and-drop kanban with MEP stages (Qualified → Site survey → BOQ & design → Quotation sent → Negotiation → PO received / Lost). Lost deals require a reason.
Opportunity	Stage tracker, value and weighted value, tonnage, next action and owner, quotations, tasks, contacts and full activity timeline.
Clients	Client 360: contacts, opportunities, AMCs, service history, projects, lifetime value, and an "AMC upsell" flag.
Client BOQ import & rate library	Upload the consultant's unpriced BOQ (.xlsx). Sections, floor-wise quantities, QRO lines, approved makes and header details (client, consultant, architect, doc ref) are read automatically. Lines are priced from the rate library or estimated from similar sizes. The priced file downloads in the client's own format.
Quotations	BOQ line-item editor with live totals, discount and GST 18%. Revisions R0...Rn with history, approval routing preview, send to client, and a printable quotation.
Approvals	Delegation matrix in action: pending approvals for the right person, decision history, and a "handled without Founder" metric.
Projects	Created automatically from won POs, then run through six phases: client award, engineering & approvals (submittals, material approvals, shop drawings), procurement, site execution, QA/QC & commissioning, and handover.
Consultants & references	Consultants and architects tracked as their own records and linked to every project they influence. Reference projects by sector for sales teams.
AMC contracts	Register with expiry countdown, automatic renewal quotations, lapse detection, and a planned PPM visit schedule with technician assignment.
Service tickets	P1/P2/P3 SLA clock, AMC coverage check, auto-dispatch, escalation ladder, resolution and client feedback.
Tasks & Inbox	Personal and team task lists (most auto-created) and a notification inbox routed by role and branch.
Automations	All rules with on/off switches, editable thresholds, run counts, a run log, and every WhatsApp/email sent on the team's behalf.
Reports & Settings	Branch performance, lead sources, lost reasons, SLA by branch, sales scorecard. Settings hold the delegation matrix, SLA policy, escalation ladder and users.

Integrations included

- **Public website form** at /enquire, ready to embed on spaceair.in/contactus.
- **REST API** POST /api/enquiries with an API key, for a WhatsApp Business webhook relay, IndiaMART, tender alerts or any other lead source. New enquiries go straight through the automation engine.

- **Outbox** for WhatsApp and email. Messages are composed and logged, ready to connect to the WhatsApp Business Cloud API and a transactional email provider.

Delegation and escalation, by design

The Founder sets the policy once in **Settings**. After that, the team and the automation engine apply it, and problems climb one level at a time.

SITUATION	LEVEL 1	LEVEL 2	FOUNDER
New enquiry not answered	Assigned engineer: task with 4 h deadline	Branch head alerted at 4 h; auto re-assigned at 24 h	Daily digest only
Follow-up overdue	Deal owner, daily reminder	Branch head after 3 days	Not involved
Discount on a quotation	≤ 3%: auto-approved	≤ 8%: branch head	> 8% or deal ≥ ₹5 Cr
Approval left pending	Reminder to approver at 12 h	Branch-head approvals escalate at 48 h	Only after escalation
Service ticket SLA	Technician + service manager at 75%	Branch head on breach	Only a P1 open for 2× its SLA
AMC expiring	Renewal quote auto-emailed at 60 d; owner task	Reminder at 30 d; branch head at 7 d	Digest if lapsed
PO received	Project, kick-off task, invoice task, client thank-you	—	Informed only for deals ≥ ₹5 Cr

All limits and timings are editable, so the matrix can be tightened or loosened as branch heads grow into the role. The **Reports** page tracks "Decisions needing the Founder" as a KPI, with a target of under 10%.

Settings: delegation matrix, SLA policy and escalation ladder

The Founder's only recurring job in the system: setting the limits.

SPACEAIR CRM · Solution report · Sirah Digital

7 / 41

The 20 rules

Each rule runs either on an event (for example, a new enquiry) or on the 15-minute schedule. Every action is idempotent, so running a rule twice never duplicates a task or a message, and every run is logged.

RULE	AREA	TRIGGER	WHAT IT DOES
Auto-assign new enquiries	Sales	When an enquiry is created (web form, WhatsApp, API or manual)	Matches the enquiry to an existing client (routes it to the account owner) or assigns the least-loaded sales engineer in the branch. Creates a first-response task with a deadline.
Instant acknowledgement to client	Sales	When an enquiry is created	Sends the client a WhatsApp (or email) within seconds with the enquiry reference and the name and number of the engineer handling it.
Enquiry response SLA	Sales	Every 15 minutes	If nobody responds within the deadline, the branch head is alerted. If it is still untouched after the re-assign window, it moves to the next available engineer automatically.
Follow-up reminders & escalation	Sales	Every 15 minutes (once per day per deal)	Reminds the opportunity owner every day a next action is overdue, and alerts the branch head when it is overdue for longer than the limit.
Stale deal nudge	Sales	Every 15 minutes (once per week per deal)	Open opportunities with no activity logged for too long get a re-engagement task for the owner.
Discount approval matrix	Approvals	When a quotation is submitted	Discounts within the sales engineer's limit are auto-approved. Larger discounts go to the branch head. Only discounts above the branch limit, or very large deals, reach the Founder. Limits are set in Settings.
Approval reminders	Approvals	Every 15 minutes	Reminds approvers of pending approvals, and escalates a branch-head approval to the Founder only if it sits untouched past the escalation window.
Quotation follow-up cadence	Sales	When a quotation is sent, plus every 15 minutes	When a quotation is sent: emails it to the client contact, moves the deal to 'Quotation sent', and schedules follow-ups at +3 and +7 days. Sends the client a WhatsApp reminder after 7 days of silence, and warns the owner before validity expires.
Won deal → project handover	Projects	When an opportunity moves to 'PO received'	When a PO arrives: creates the project with a handover checklist, and gives the branch head a kick-off task and Accounts an advance-invoice task. Also sends the client a thank-you and schedules an AMC proposal before handover.
Lost deal review & re-engagement	Sales	When an opportunity is marked Lost	Gives the branch head a review task with the lost reason, and schedules a 90-day check-in with the client so the relationship is not dropped.
Service ticket auto-dispatch	Service	When a service ticket is created	Applies the SLA for the priority and checks AMC coverage: uncovered calls are marked chargeable and the service manager is told. Assigns the least-loaded technician in the branch and WhatsApps the client the ticket number and technician's name.

SLA escalation ladder	Service	Every 15 minutes	At 75% of the SLA, alerts the technician and service manager. On breach, the branch head is alerted. Only a P1 breached for twice its SLA reaches the Founder.
Customer feedback after resolution	Service	When a ticket is resolved	Sends the client a one-tap WhatsApp rating as soon as a ticket is resolved.
AMC renewal autopilot	AMC	Every 15 minutes	Within the notice window, creates a renewal opportunity and quotation (with the standard uplift), emails it to the client and gives the owner a follow-up task. Reminds at 30 days and alerts the branch head at 7 days. Marks the AMC lapsed on expiry.
PPM visit planner	AMC	Every 15 minutes	Plans every preventive-maintenance visit for the contract year as soon as an AMC starts, assigns a technician, reminds them the day before, and flags missed visits to the service manager.
BOQ auto-pricing from the rate library	Estimation	When a BOQ Excel is imported	When a client or consultant BOQ is imported, every line is priced from the company rate library (exact match) or estimated from similar sizes in the same section (e.g. fans by CFM, trays by width). The estimator gets one review task listing what still needs a rate.
Rate library learns from every quotation	Estimation	When a quotation is sent	When a quotation is sent to a client, its supply and installation rates are saved to the rate library. The next BOQ with the same items prices itself, so pricing knowledge stays with the company instead of one person.
Tender / BOQ submission deadline	Estimation	Every 15 minutes	Tracks the client's submission date on imported BOQs. Alerts the estimator and deal owner 48 h before, the branch head 24 h before, and flags missed submissions.
Project phase gates & handover	Projects	When a project checklist changes, plus every 15 minutes	Moves each project through Client award → Engineering & approvals → Procurement → Site execution → QA/QC & commissioning → Handover as checklist items are completed, and hands work to the next team (e.g. Procurement). Reminds the PM when consultant approvals stall. On handover it creates an AMC opportunity, so the relationship continues into service.
Exception-only daily digest	Management	Daily at the configured hour	Every morning the Founder gets one email listing only what needs them: pending owner approvals, P1 breaches, lapsed AMCs and big wins or losses. Each branch head gets a branch digest, so nobody has to chase updates by phone.

Building the BOQ quotation, without the spreadsheet marathon

Estimation is the step the team finds hardest to put into software. A consultant sends an unpriced BOQ in Excel with hundreds of lines, floor-wise quantities, "QRO" rate-only items and an approved-makes list. Someone senior prices it line by line from memory and old files, then pastes the rates back into the consultant's format. The CRM turns this into a guided, repeatable flow:

What is automatic

- Client, consultant, architect, doc ref and revision are picked up from the BOQ header, and the opportunity and contacts are created.
- Every line keeps its item number, section, floor quantities and QRO flag.
- Exact matches are priced from the rate library, with supply and installation kept separate.
- Missing sizes are estimated from the nearest sizes in the same section (e.g. a 6200 CFM fan from the 5250 and 8950 CFM rates) and tagged "estimated" for review.
- One review task for the estimator, plus submission-deadline alerts.
- Export writes rates and selected makes into the consultant's own workbook. Formulas, sheets and images stay as they were, and Excel recalculates on open.

Why this reduces dependency

- Pricing knowledge moves from one person's memory into a company rate library that grows with every quotation sent.
- A junior estimator can price a 200-line BOQ by reviewing flagged lines instead of starting from zero.
- Discounts still follow the delegation matrix, so control is kept without every quote going to the Founder.
- Built for the standard consultant layout: summary sheet, item-wise BOQ with floor quantities and QRO lines, approved makes and datasheet annexures. Export keeps every sheet, image and formula.

Rates shown in screenshots are sample rates. In production the library is seeded from SPACEAIR's own past priced BOQs.

CRM, ERP, or both?

This system is a **CRM with estimation, project-delivery and service operations**, not an ERP. An ERP (SAP Business One-based products, Tally, Zoho Books) is the system of record for accounting, GST invoicing, inventory, purchasing and payroll. This CRM covers what happens before and around those transactions: enquiries, consultant BOQs, pricing, approvals, project workflow, AMC and service. That is where SPACEAIR's owner-dependency sits.

NEED	WHERE IT BELONGS
Enquiries, pipeline, follow-ups, client history	CRM (this system)
Consultant BOQ import, pricing, revisions, approval matrix	CRM (this system); typically the weakest area in ERPs
Project phases, submittal approvals, handover, AMC, SLA service	CRM (this system)
Accounting, GST invoices, stock, vendor POs, payroll	ERP, connected to the CRM so won orders and AMC invoices flow across

Recommendation: keep or choose an ERP for finance and inventory, and integrate it with this CRM through its API rather than forcing sales and estimation workflows into the ERP.

The application, screen by screen

All screenshots were captured automatically from the running application with Playwright. All client names, people and figures are sample data.

Sign-in by role

Each role sees its own branch, queue and approvals. Production would use Microsoft 365 / Google SSO.

Founder dashboard

KPIs across branches, the one approval that genuinely needs the Founder, alerts, and a live feed of what the automation engine did.

New enquiry

Import client BOQ

Upload the unpriced BOQ exactly as the consultant sent it (.xlsx). The CRM reads the sections, floor-wise quantities, QRO lines and approved makes, then prices it from the rate library. Export returns the client's own file with the rates filled in and every formula intact.

BOQ workbook (.xlsx)

Choose File No file chosen

Link to opportunity

Create a new opportunity from the BOQ header (client, consultant, architect)

Branch

Chennai

Division

Detect from BOQ

Submission due date

dd-mm-yyyy

Import & auto-price

What happens on import

1. Header details (client, consultant, architect, doc ref, revision) are read from the Summary sheet.

2. Every line keeps its item no., section, floor-wise quantities and QRO flag.

3. Rates come from the rate library (70 items today) or are estimated from similar sizes. Every rate is tagged so the estimator knows what to check.

4. The estimator gets one review task; deadline alerts follow the submission date.

5. When the quote is sent, its rates are added to the library, so the next BOQ prices itself.

Download a sample unpriced BOQ to try

Rate library

The company price book, learned from every quotation sent.

SALES

Auto-assign new enquiries

Match the enquiry to an existing client (route it to the account named) or assigns the least-loaded sales engineer in the branch. Creates a first response task with a deadline.

When an enquiry is created (web form, WhatsApp, API or manual)

4 actions

4 runs

last 1 min ago

First response deadline (hours)

4

Save

Instant acknowledgement to client

Sends the client a WhatsApp (or email) within seconds with the enquiry reference and the name and avatar of the engineer handling it.

When an enquiry is created

4 actions

4 runs

last 1 min ago

Enquiry response SLA

If nobody responds within the deadline, the branch head is alerted. If it is still untouched after the re-assign window, it moves to the next available engineer automatically.

Every 15 minutes

3 actions

1 run

last 1 min ago

Alert branch head after (hours)

Re-assign after (hours)

4

24

Save

Follow-up reminders & escalation

Reminds the opportunity owner every day a next action is overdue, and alerts the branch head when it is overdue for longer than the limit.

Every 15 minutes (once per week per deal)

5 actions

1 run

last 1 min ago

Alert branch head after (days overdue)

3

Save

Stale deal nudge

Open opportunities with no activity logged for too long get a re-engagement task for the owner.

Every 15 minutes (once per week per deal)

2 actions

1 run

last 1 min ago

Info due before rule

14

Save

Quotation follow-up cadence

When a quotation is sent, emails it to the client contact, moves the deal to "Quotations sent", and schedules follow-up at +3 and +7 days. Sends the client a WhatsApp reminder after 7 days of silence, and warns the owner before validity expires.

When a quotation is sent, plus every 15 minutes

4 actions

2 runs

last 1 min ago

Next follow-up (days)

Second follow-up & client reminder (days)

3

7

Save

Lost deal review & re-engagement

Grabs the branch head a review task with the lost reason, and schedules a 90-day check-in with the client as the relationship is not dropped.

When an opportunity is marked Lost

2 actions

1 run

last 1 min ago

Re-engage after (days)

90

Save

PROJECTS

Won deal -> project handover

When a P21 wins, creates the project with a handover checklist, and gives the branch head a kick-off task and Accounts an advance-invoice task. Also sends the client a thank-you and schedules an AMC proposal before handover.

When an opportunity moves to "P21 reached"

0 actions

0 runs

Propose AMC after (days)

60

Save

Project phase gates & handover

Moves each project through Client award -> Engineering & approvals -> Procurement -> Site resolution -> O&M & commissioning -> Handover as checklist items are completed, and hands work to the next team (e.g. Procurement). Reminds the PM when consultant approvals stall. On handover it creates an AMC opportunity, so the relationship continues into service.

When a project checklist changes, plus every 15 minutes

3 actions

2 runs

last 1 min ago

Remind PM if approvals open after (days)

AMC value estimate (% of project value)

14

3

Save

AMC

AMC renewal autopilot

Within the notice window, creates a renewal opportunity and quotation (with the standard upRt), emails it to the client and gives the owner a follow-up task. Reminds at 30 days and alerts the branch head at 7 days. Marks the AMC "upRt" on expiry.

Every 15 minutes

6 actions

1 run

last 1 min ago

Start renewal (days before expiry)

Standard renewal upRt (%)

60

7

Save

PPM visit planner

Plans every preventive-maintenance visit for the contract year as soon as an AMC starts, assigns a technician, reminds them the day before, and flags missed visits to the service manager.

Every 15 minutes

9 actions

1 run

last 1 min ago

Next missed after (days)

2

Save

SERVICE

Service ticket auto-dispatch

Applies the SLA for the priority and checks AMC coverage: uncovered calls are marked chargeable and the service manager is told. Assigns the least-loaded technician in the branch and WhatsApps the client the ticket number and technician's name.

When a service ticket is created

2 actions

1 run

last 1 min ago

SLA escalation ladder

At 75% of the SLA, alerts the technician and service manager. On breach, the branch head is alerted. Only a P21 checked-for twice by SLA reaches the Founder.

Every 15 minutes

12 actions

1 run

last 1 min ago

Early warning at (% of SLA used)

75

Save

Customer feedback after resolution

Sends the client a one-up WhatsApp asking as soon as a ticket is resolved.

When a ticket is resolved

0 actions

0 runs

MANAGEMENT

Exception-only daily digest

Every morning the Founder gets one email listing only what needs them: pending owner approvals, P21 breaches, lapsed AMCs and log wins or losses. Each branch head gets a branch digest, so nobody has to chase updates by phone.

Technologies used

LAYER	TECHNOLOGY	VERSION	ROLE IN THE CRM
Framework	Next.js	16.3.6	App Router, React Server Components, Server Actions, Turbopack builds, instrumentation hook for the scheduler
UI library	React	19.2.8	Server + client components; useOptimistic for instant drag-and-drop on the pipeline
Language	TypeScript	5.9.3	Strict mode end to end: schema, queries, actions and UI share types
Styling	Tailwind CSS	4.3.3	v4 CSS-first theme tokens; light and dark themes; responsive down to phone width
Database	SQLite via libSQL	0.18.0	Zero-setup local file database; the same driver connects to Turso (hosted libSQL) in production
ORM	Drizzle ORM + Drizzle Kit	0.45.3 / 0.31.11	Type-safe schema and queries; `drizzle-kit push` creates tables; portable to PostgreSQL
Validation	Zod	4.6.5	Validates every form, the quotation editor payload and the public enquiry API
Auth / sessions	jose (JWT)	6.2.12	Signed, HTTP-only session cookie; role- and branch-scoped access. Swap-in point for Microsoft 365 / Google SSO
Scheduler	node-cron	4.6.0	Runs time-based automation rules every 15 minutes inside the Next.js server
Charts	Recharts	3.10.1	Interactive report charts with tooltips, themed from the same design tokens
Icons	Lucide	1.48.0	Consistent open-source icon set
Fonts	Archivo, IBM Plex Sans / Mono	Google Fonts	Loaded and self-hosted through next/font
Testing & capture	Playwright	1.63.0	End-to-end workflow tests, screenshots and this PDF, driving the installed Chrome
Excel engine	ExcelJS	4.4.0	Reads consultant BOQ workbooks and writes rates back into the client's own file, keeping formulas, images and sheets
Tooling	tsx, ESLint	4.23.15	Runs seed / test / report scripts in TypeScript; linting
Runtime	Node.js	20.20.0	Server runtime (Next.js 16 requires 20.9+)

Architecture

Presentation

React Server Components render pages on the server with data already loaded. Small client components handle the kanban, BOQ editor, charts and forms.

Application

Server Actions for every mutation (validated with Zod). Each action emits a domain event, such as `enquiry.created` or

Automation engine

A rule registry with event and scheduled handlers. All side effects (tasks, alerts, messages) go through one context with de-duplication keys and a run log.

	opportunity.won, to the automation engine.	
Data Drizzle ORM over libSQL/SQLite: 21 tables, including a learned rate library and reference projects, covering users, clients, contacts, enquiries, opportunities, activities, tasks, quotations, BOQ items, approvals, projects, AMCs, PPM visits, tickets, notifications, outbox, rules, runs and settings.	Security Signed JWT session cookie (HTTP-only), role- and branch-scoped queries, owner-only settings, and an API key on the integration endpoint.	Integrations Public web form, REST enquiry API, and a WhatsApp/email outbox ready for the WhatsApp Business Cloud API and an email service.

Path to production

- **Hosting:** deploy the Next.js app to Vercel, Azure App Service or an Indian-region VM; move the database to Turso (same driver) or PostgreSQL (Drizzle supports both).
- **Sign-in:** Microsoft 365 or Google SSO, with OTP for technicians.
- **Messaging:** connect the outbox to the WhatsApp Business Cloud API (approved templates) and to SES, Resend or SMTP for email.
- **Accounting:** Tally / Zoho Books sync for invoices raised from project and AMC tasks.
- **Next phases:** technician PWA with photos and client sign-off; client portal; AI reading of tender and BOQ PDFs into draft quotations; BMS / LG cloud alarms creating tickets automatically; INR + LKR for Colombo.

Testing and verification

The production build compiles with strict TypeScript and no errors. An automated Playwright test drives the real UI through the core workflows and checks the database after each step:

RESULT	CHECK
PASS	5% discount quotation goes to pending approval
PASS	...routed to the branch head, not the Founder
PASS	Branch head approval marks quotation approved
PASS	Quotation emailed to client
PASS	Two follow-up tasks scheduled
PASS	Deal moved to Quotation sent
PASS	Won deal created a project
PASS	Advance-invoice task for Accounts
PASS	New ticket auto-assigned to a technician
PASS	No AMC → marked chargeable
PASS	Feedback WhatsApp sent on resolution
PASS	Enquiry converted to opportunity
PASS	BOQ imported: 17 lines, 3 QRO
PASS	Auto-priced: 13 from library, 3 estimated
PASS	Consultant and architect linked from the BOQ header
PASS	Estimator review task created
PASS	Priced BOQ downloads as .xlsx
PASS	Rates written into the client's workbook, formulas kept
PASS	Sending the quote grows the rate library
PASS	Engineering done → project moves to Procurement
PASS	Procurement team notified
PASS	GET /dashboard → 200
PASS	GET /enquiries → 200
PASS	GET /pipeline → 200
PASS	GET /clients → 200
PASS	GET /clients?tab=Consultants → 200
PASS	GET /quotations → 200

PASS	GET /quotations/import → 200
PASS	GET /quotations/rates → 200
PASS	GET /references → 200
PASS	GET /approvals → 200
PASS	GET /projects → 200
PASS	GET /amc → 200
PASS	GET /service → 200
PASS	GET /tasks → 200
PASS	GET /reports → 200
PASS	GET /automations → 200
PASS	GET /automations/messages → 200
PASS	GET /settings → 200
PASS	GET /notifications → 200

40 of 40 checks passed. The workflows covered are: discount routing to the branch head, branch-head approval, sending the quotation with its auto-email and follow-ups, PO → project and invoice task, service ticket auto-dispatch with the chargeable flag, feedback on resolution, enquiry conversion, and every main page loading.

Known limitations of this build

- WhatsApp and email messages are recorded in the outbox, not delivered; delivery needs the provider accounts listed above.
- Sign-in is a role picker for demonstration; SSO is a production task.
- The rate library holds sample rates. It needs seeding from SPACEAIR's own priced BOQs before real use.
- The BOQ reader handles the standard consultant layout (S.No / description / unit / floor quantities / total / supply rate / installation rate). Unusual layouts may need a column-mapping step.
- Sample data only. Client names come from SPACEAIR's public client list and do not represent real transactions.

Setup and demo script

```
cd spaceair-crm
npm install          # first time only
npm run setup        # creates the database and loads sample data
npm run build
npm start            # open http://localhost:3000
```

Other scripts: `npm run dev` (development mode), `npm run db:seed` (reset the sample data), `npm run e2e` (workflow tests, run against port 3100), `npm run screenshots` and `npm run report` (regenerate this PDF).

Suggested 10-minute demo

1. Sign in as **Founder**. The dashboard shows only exceptions: one approval, one critical ticket, and the automation feed.
2. Open `/enquire` in a second tab, submit an enquiry, then open it in **Enquiries**: it is auto-assigned and the WhatsApp is logged.
3. **Pipeline**: drag a deal to *PO received*, then open **Projects** to see the handover checklist and tasks.
4. **Quotations** → Q-26-187: change a quantity and the discount, and watch the approval route change.
5. **Import client BOQ**: upload `public/samples/Sample-Unpriced-BOQ-HVAC.xlsx` and see it priced in seconds; download the priced file in the same format.
6. **Projects** → P-2603: tick the remaining approvals and watch it move to Procurement.
7. Sign in as **Karthik (sales)**, draft a quote at 5% and submit it. Sign in as **Ramesh (branch head)** and approve it. The Founder is never involved.
8. **AMC contracts**: renewal quotes already sent, and a lapsed contract flagged.
9. **Service**: SLA ladder and chargeable calls. Sign in as **Manoj (technician)** on a phone-sized window.
10. **Automations** and **Reports**: every rule and threshold, and the "decisions needing the Founder" KPI.
